

STANDARD OPERATING PROCEDURE

Asili Yetu Safaris: Admin Booking Workflow SOP

This document outlines the standard operating procedure for handling incoming safari inquiries. Following this step-by-step guide ensures that no guest falls through the cracks and that every booking is handled with the premium, tailor-made approach Asili Yetu promises.

The Booking Lifecycle at a Glance

Every inquiry moves through **5 distinct statuses** in the Command Center: 1. **New** : A fresh inquiry has just arrived. 2. **In Discussion** : You are actively reviewing details or chatting with the guest. 3. **Quote Sent** : You have generated and shared a final price/invoice. 4. **Confirmed** : The guest has authorized the trip and paid/secured their booking. 5. **Cancelled** : The inquiry did not proceed.

Step-by-Step Workflow for Admins

STEP 1: A New Inquiry Arrives

Trigger: A guest fills out the "Plan Safari" tool or clicks "Book Now" on a specific package. * **What the System Does Automatically:** * Creates an inquiry record in the database. * Sends an acknowledgment email to the guest. * Generates a secure, private **Guest Portal Link** for that specific customer. * **Your Action:** * Log into the **Command Center** and navigate to the **Bookings** module. * Look for inquiries marked as **New**. * Review the guest's submitted details: Dates, number of people, requested add-ons (e.g., Hot Air Balloon), and dietary requirements.

STEP 2: Initiate Contact & Refine the Trip

Trigger: You have reviewed the initial request and need to tailor the itinerary or confirm availability. * **Your Action:** * Change the inquiry status from New to **In Discussion**. * Use the **Guest Portal messaging system** (or direct email/WhatsApp) to introduce yourself. * Ask clarifying questions if necessary (e.g., "Do you prefer luxury lodges or classic tented camps?"). * Confirm vehicle and guide availability internally for their requested dates.

STEP 3: Prepare and Send the Quote

Trigger: The itinerary details are finalized, and you are ready to present the final price. * **Your Action:** * Calculate the final total (adjusting the base package price based on guest count, seasonality, and add-ons). * Update the quoted price in the Command Center booking record. * Change the status to **Quote Sent**. * Notify the guest (via the portal or email) that their custom quote is ready for review. * **What the Guest Sees:** * The guest logs into their private portal. * They see the updated total price and the final itinerary breakdown.

STEP 4: Guest Authorization & Payment

Trigger: The guest is happy with the quote and wants to lock it in. * **What the Guest Does:** * The guest authorizes the expedition via their portal. * **Your Action:** * Send

formal payment instructions/invoices (if not handled natively through the portal). * Monitor the account for the deposit or full payment.

STEP 5: Final Confirmation

Trigger: Payment is received, and the trip is 100% locked in. * **Your Action:** * Change the inquiry status to **Confirmed**. * Ensure the guest receives a final Confirmation Email with their pre-departure briefing. * Assign the specific **Guide** and **Vehicle (Fleet)** to this booking in the Command Center.

Best Practices & Golden Rules

[!WARNING] **Never promise instant confirmation.** Always remind guests that availability is subject to operational review until the trip is officially marked as Confirmed.

[!TIP] **Use the Guest Portal.** Encourage guests to use their private portal link. It keeps all messaging, itinerary details, and pricing in one centralized, professional environment rather than getting lost in email threads.

[!IMPORTANT] **Pricing is Flexible.** Remember that package prices shown on the public website are reference/starting prices. You have full authority to negotiate and adjust the final quote based on the specific tailor-made reality of their trip.

[!NOTE] **Keep Statuses Updated.** Always keep the booking status accurate in the Command Center. This triggers the correct automated UI updates for the guest on their portal and keeps the team synchronized.
